

# Plastic Profile Extrusion Line

This extrusion line is designed for producing a variety of plastic profiles with precision and efficiency. It features advanced control systems for accurate parameter adjustment and consistent output.

## Product Overview

### High-Efficiency Profile Extrusion Line

This comprehensive extrusion line is engineered for the precision manufacturing of various plastic profiles, including window frames and door profiles. The system integrates an extruder, calibration unit, cooling bath, haul-off unit, and cutting unit into a seamless production flow. Featuring advanced control systems, it ensures consistent output quality and allows for accurate parameter adjustments to meet rigorous construction material standards.

## System Components

### Included Modules

- Extruder
- Calibration unit
- Cooling bath
- Haul-off unit
- Cutting unit

## Application

### Primary Applications

Window Profiles, Door Frames, Construction Materials

## Operational Features

### Control System

Advanced Control System • Precision Parameter Adjustment
