

Plastic Profile Extrusion Machine

This extrusion machine is designed for continuous production of plastic profiles or products. It is suitable for various industrial applications.

Product Overview

High-Efficiency Plastic Profile Extrusion

This advanced extrusion machine is engineered for the continuous production of high-quality plastic profiles. Featuring an integrated control panel with a digital display and a dedicated material hopper, the system ensures precise feeding and consistent processing for industrial applications. The included blue cooling unit optimizes thermal management, making it a reliable solution for demanding manufacturing environments.

Technical Specifications

Key Components

- Control panel with digital display
- Material feeding hopper
- Integrated cooling unit

Machine Type

Plastic Profile Extrusion Machine

Operational Features

Production Capability

Continuous Production • Industrial Grade

Application Suitability

Plastic Profiles, Industrial Processing
