

Plastic Profile Extrusion Machine

This plastic extrusion machine is designed for continuous production of plastic profiles. It is suitable for manufacturing various plastic products, including pipes, profiles, and sheets.

Overview

High-Efficiency Plastic Profile Extrusion

This plastic profile extrusion machine is engineered for the continuous, high-precision production of various plastic profiles, pipes, and sheets. It integrates a robust material feeding system, advanced extrusion shaping technology, and a reliable cooling unit to ensure consistent material solidification. Designed for industrial reliability, the machine features an intuitive control panel for precise parameter adjustment and a durable frame for long-term operation.

Technical Features

Key Components

- Material Feeding Hopper
- Extrusion Unit with Shaping Die
- Integrated Cooling System
- Centralized Control Panel
- Reinforced Protective Frame

Suitable Applications

Plastic Pipes, Plastic Profiles, Plastic Sheets

Operational Details

Maintenance Access

Yes
