

Plastic Radial Blower Wheel

This blower wheel facilitates efficient air circulation across various applications. Its radial blade design ensures high airflow and static pressure, making it suitable for HVAC systems, industrial equipment, and cooling tasks.

Product Overview

High-Efficiency Radial Blower Wheel

This radial blower wheel is engineered for superior air circulation in demanding environments. Featuring a specialized radial blade design, it delivers optimal airflow and static pressure, making it an ideal component for HVAC systems, industrial machinery, and cooling solutions. Its durable plastic construction provides an excellent balance of structural strength and lightweight performance.

Technical Specifications

Common Applications

- HVAC Systems
- Industrial Equipment
- Cooling Applications

Material	Durable Plastic
Key Features	Radial Blade Design, High Static Pressure, High Airflow, Central Hub Mounting
Mounting	Central Hub for Motor Shaft
