

Plastic Recycling Crusher

The Plastic Recycling Crusher Machine efficiently reduces the size of plastic materials. It is designed for processing various types of plastic waste, facilitating recycling and material recovery.

Product Overview

High-Efficiency Plastic Size Reduction

The Plastic Recycling Crusher is engineered for the efficient size reduction of various plastic waste materials, supporting effective recycling and material recovery processes. Built with a heavy-duty steel frame and high-speed cutting blades, this machine ensures durability and consistent performance in demanding industrial environments. It features a robust crushing chamber and integrated safety mechanisms to provide a reliable and secure solution for plastic processing.

Core Components

Key Components

- Feeding hopper
- Crushing chamber
- Rotating blades
- Discharge outlet
- Heavy-duty steel frame

Technical Specifications

Power Source	Electric motor with belt drive connection
Blade System	High-speed cutting blades

Applications

Material Compatibility	Plastic Waste, Recyclable Plastics, Industrial Scrap
------------------------	--

Safety & Construction

Safety Standards

Accident Prevention Features • Robust Construction

Frame Construction	Heavy-duty steel
--------------------	------------------
