

Plastic Rivets with Flanged Head

These plastic rivets feature a flanged head and mandrel for secure fastening. They are suitable for use in automotive, electronics and general assembly.

Product Overview

Versatile Plastic Fastening Solution

These plastic rivets with flanged heads provide a reliable and durable method for fastening various materials across multiple industries. Designed with an integrated mandrel for secure installation, they offer a clean, professional finish. Their corrosion-resistant properties make them an ideal choice for automotive, electronics, and general assembly applications where longevity is required.

Key Features

Material Characteristics

Corrosion-resistant, Durable Plastic, Flanged Head Design

Application Areas

Suitable Industries

- Automotive
- Electronics
- General Assembly

Technical Details

Installation

Mandrel-based secure installation

Size Options

Available in various sizes to accommodate different material thicknesses and hole diameters
