

# Plastic Sheet and Board Production Line

This plastic machinery is designed for the production of plastic sheets or boards. The system includes an extruder, rollers, forming stations, and a cutting unit to shape, cool, and trim the plastic.

## Overview

### High-Efficiency Plastic Sheet & Board Production

This industrial production line is engineered for the continuous manufacturing of high-quality plastic sheets and boards. The system integrates a robust extrusion unit with a precision hopper for consistent material input, followed by a series of specialized rollers and forming stations designed for optimal cooling and shaping. Equipped with an advanced control panel, operators can precisely adjust processing parameters to ensure dimensional accuracy and superior final product quality.

## System Components

### Key System Modules

- Extruder with material hopper
- Forming and cooling roller series
- Precision cutting and trimming unit
- Centralized control panel

### Application Compatibility

Plastic Sheet Manufacturing, Plastic Board Production, Custom Dimension Processing

## Performance

### Operational Highlights

**1 High**

Control Precision

**1 Reliable**

Operational Efficiency
