

Plastic Sheet and Film Extrusion Machine

This plastic machinery is designed for producing plastic sheets or films. It features a multi-stage process including material feeding, extrusion, cooling, and winding.

Overview

High-Efficiency Extrusion System

This plastic sheet and film extrusion machine is engineered for high-volume industrial production. The system integrates a multi-stage process, covering material feeding, precise extrusion, cooling, and winding to ensure consistent output quality. Designed for professional manufacturing environments, it features a centralized control panel for streamlined operation and robust safety mechanisms.

Technical Specifications

Process Stages

- Material Feeding
- Extrusion
- Cooling
- Winding

Application

Plastic Sheet Production, Plastic Film Production, High-Volume Manufacturing

Safety & Control

Safety Features

Winding Station Safety Cages • Centralized Control Panel
