

Plastic Sheet and Film Production Line

This plastic machinery line is designed for producing plastic sheets or films. It incorporates advanced control systems for precise process management, ensuring consistent product quality and efficient operation.

Overview

High-Efficiency Production Line

This industrial-grade production line is engineered for the continuous manufacturing of plastic sheets and films. The system integrates a comprehensive multi-stage process, covering raw material feeding, precision extrusion, calendaring, and cooling, culminating in high-speed winding or cutting. Designed for consistency and reliability, it utilizes advanced control systems to ensure optimal process management for various applications, including packaging and agricultural films.

Technical Capabilities

Production Capabilities

- Raw material feeding
- Precision extrusion
- Calendaring and forming
- Cooling system
- Winding and cutting

Application Suitability

Packaging Films, Agricultural Films, Industrial Sheets

Control Systems

Control Features

Advanced Control Systems • Precise Process Management • Consistent Quality Output
