

Plastic Tape Winder for Efficient Tape Handling

This high-speed plastic tape winder is designed for efficient and precise winding of plastic tapes. It features individual winding heads with tension control and an automatic stop motion for stable operation.

Overview

High-Efficiency Plastic Tape Winder

This high-speed plastic tape winder is engineered for precise and reliable tape handling in industrial environments. It features independent motor drives for the cam and bobbin, ensuring perfect synchronization through advanced programming. With automated speed ratio adjustments and individual spindle length control, this system delivers consistent, high-quality winding results for various tape specifications.

Operational Features

Drive System	Independent motor drive for cam and bobbin
Synchronization	Program-controlled automatic synchronization
Speed Ratio Adjustment	Online automatic adjustment

Control & Monitoring

Spindle Control

- Individual spindle length control
- Integrated light alarm system

Application Compatibility

Industry Suitability	Plastic Manufacturing, Textile Industry
----------------------	---
