

Plug and Lampholder Combination Unit

This device combines a standard plug for connecting to a power source with a lampholder for securing and powering a light bulb. It is suitable for applications where a combined power connection and lighting solution is required.

Product Overview

Plug and Lampholder Combination Unit

This Plug and Lampholder Combination Unit is designed for efficient electrical power transmission and distribution. It seamlessly integrates a standard plug for power source connection with a secure lampholder for bulb installation. This dual-functionality makes it an ideal solution for applications requiring both power connectivity and lighting in a single compact unit.

Technical Specifications

Material	Bakelite
Pin Diameter	4 mm
