

Plunger Valve for Diesel Engines

This plunger valve is designed for use in diesel engine oil systems. It is suitable for the assembling of nozzle plunger valves and three-pair precise parts.

Product Overview

Precision Engineered Plunger Valve

This plunger valve is a critical component for diesel engine fuel injection systems, designed to ensure optimal performance and fuel efficiency. With over three decades of manufacturing expertise, these precise components are built to meet rigorous industrial standards. They serve as essential parts for maintaining the reliability and longevity of heavy-duty diesel engines.

Manufacturing & Quality

Facility Scale

110000 sqm

Total Area

58000 sqm

Construction Area

Industry Experience	35 years
Dedicated Engineering Team	386
Total Workforce	2000

Product Details

Component Type

Fuel Injection System • Diesel Engine Part • Precision Component
