

PN25 Brass Ball Valve for HVAC&R

This brass ball valve is designed for controlling the flow of fluids in HVAC&R systems. It features a durable brass body and threaded connections for secure installation.

Overview

Professional HVAC&R Flow Control

This PN25 rated brass ball valve is engineered for reliable flow control in HVAC and refrigeration systems. Constructed with a durable brass body and a precision-engineered chromed brass ball, it ensures long-term performance and resistance to corrosion. Designed for ease of use, it features a clear manual lever handle for quick on/off operation.
