

# Pneumatic Air Distribution Manifold

This pneumatic tool accessory is designed for efficient air distribution with a five-port configuration. Its translucent construction allows for visual inspection of internal components, ensuring optimal performance and easy integration into pneumatic systems.

## Product Overview

### Pneumatic Air Distribution Manifold

This pneumatic air distribution manifold is engineered to efficiently manage airflow in complex pneumatic systems, ensuring optimal performance and reliability. Featuring a five-port configuration, it allows for seamless connection of multiple pneumatic tools or lines. The unit is constructed from a durable, translucent material, which facilitates easy visual inspection of internal components during operation. Its compact design ensures straightforward integration into existing setups, making it a versatile and essential component for various industrial pneumatic applications.

## Technical Specifications

Model Number	HL602
Port Configuration	5 ports
Material Type	Translucent durable polymer
Key Features	Compact Design, Visual Inspection Ready, Multi-Port Distribution
