

Pneumatic Air Skates

Pneumatic air skates facilitate the movement of heavy-duty equipment through doorways, both indoors and outdoors. They eliminate the need for forklifts by using a low-profile design.

Overview

Precision Heavy Load Movement

Pneumatic air skates provide an advanced solution for moving heavy-duty equipment without the need for forklifts. By utilizing compressed air to create a thin film between the load and the floor, these systems allow for smooth, omnidirectional movement. Their low-profile design ensures they can easily navigate through doorways, making them ideal for both indoor and outdoor industrial applications.

Performance

Load Capacity

10 MT

Minimum Capacity

100 MT

Maximum Standard Capacity

Movement Capabilities

Omnidirectional, Low-profile, Precision positioning

Technical Details

Key Operational Benefits

- Eliminates need for forklifts
- Reduces floor stress
- Fast and flexible transfer
- Increases movement productivity

Power Source

Compressed Air
