

Pneumatic Brake Chamber

This heavy-duty brake chamber is designed for pneumatic braking systems. It incorporates both a service brake section and a spring brake section for parking and emergency braking.

Overview

Heavy-Duty Pneumatic Brake Chamber

This pneumatic brake chamber is engineered for high-performance braking systems in heavy-duty vehicles. It features a robust, dual-section design incorporating both a service brake and a spring brake for reliable parking and emergency stopping capabilities. Built for durability and consistent force delivery, it ensures safe and efficient operation in demanding conditions.

Technical Specifications

Key Features

- Robust construction for heavy-duty applications
- Integrated parking and emergency braking
- Threaded ports for secure air connections
- Includes clevis for linkage

Performance Highlights

1 High

Reliability

1 Heavy-Duty
