

Pneumatic Cleaning Machine Cylinder

Component used in cleaning machines. It is a cylindrical housing with square end caps, likely for pneumatic or hydraulic actuation.

Product Overview

Precision Pneumatic Cylinder for Industrial Cleaning

This pneumatic cleaning machine cylinder is engineered for reliable actuation and positioning within heavy-duty industrial cleaning systems. Featuring a robust cylindrical housing with reinforced vertical supports, it is designed to withstand the rigorous demands of automated cleaning environments. The assembly incorporates secure, bolted end caps to ensure structural integrity and consistent performance during operation.

Technical Specifications

Housing Material	Aluminum or Stainless Steel
Construction	Cylindrical housing with square end caps
Mounting	Bolted end cap assembly

Application

Primary Application	Industrial Cleaning, Pneumatic Actuation, Machinery Positioning
