

Pneumatic Control Component

This pneumatic component is designed for industrial applications. It features a blue body with a circular opening and a black actuator for remote control and automation.

Product Overview

Industrial Pneumatic Control

This pneumatic control component is engineered for demanding industrial environments requiring reliable fluid or gas flow regulation. Featuring a robust blue-colored body and a responsive top-mounted actuator, it is designed for seamless integration into automated systems. Its construction ensures durability and precision in remote control applications.

Technical Specifications

Actuation Mechanism	Pneumatic
Component Category	Valve/Actuator
Suitable Applications	Industrial Automation, Fluid Control, Gas Flow Regulation

Design Features

Build Quality

Robust Construction • Remote Control Ready
