

# Pneumatic Control Unit with Regulator and Dual Gauges

This pneumatic control unit is designed for precise air pressure regulation and monitoring in industrial applications. It ensures a stable and controlled air supply to pneumatic tools and equipment, enhancing efficiency and safety.

## Overview

### Professional Pneumatic Control Unit

This pneumatic control unit is designed for precise air pressure regulation and monitoring in industrial environments. Featuring a high-quality regulator with an intuitive adjustment knob and integrated dual pressure gauges, it ensures consistent output pressure for pneumatic tools. Its robust construction and automated pressure switch capabilities make it an ideal solution for maintaining stable and safe air supply systems.

## Technical Specifications

### Core Features

- Dual pressure gauge monitoring
- Integrated pressure switch for automation
- Precise pressure regulation
- Compact integration-ready design

### Performance Metrics
