

Pneumatic Hand Brake Valve for Commercial Vehicles

This pneumatic hand brake valve is designed for commercial vehicle braking systems. It allows manual application of the vehicle's spring brakes, typically used for parking or emergency stopping.

Product Overview

Professional Pneumatic Hand Brake Valve

This pneumatic hand brake valve is engineered specifically for commercial vehicle braking systems, providing reliable manual control for parking and emergency stopping functions. The unit features a robust, silver-finished metal body designed to withstand the rigorous demands of heavy-duty transport environments. With integrated mounting flanges and multiple air line ports, it ensures secure installation and precise integration into existing pneumatic brake circuits.

Technical Specifications

Construction

Metal Body • Silver Finish

Application	Commercial Vehicles
Braking System	Pneumatic
Primary Function	Parking Brake, Emergency Stop
Mounting	Integrated Flange
