

# Pneumatic Internal Pipe Alignment Clamp

The Pneumatic Internal Pipe Alignment Clamp is designed for aligning pipe sections during welding. It utilizes pneumatic power to expand and secure itself within the pipe, providing precise alignment and consistent weld preparation.

## ADDITIONAL IMAGES

## Product Overview

### High-Precision Pipeline Alignment

The Pneumatic Internal Line-up Clamp is a specialized industrial tool engineered for the precise alignment of pipe sections during welding and assembly processes. Utilizing advanced pneumatic power, it expands internally to secure pipes firmly, ensuring consistent weld preparation and structural integrity. Designed for pipeline construction, repair, and maintenance, this tool significantly enhances productivity by streamlining setup and release operations while reducing manual labor requirements.

## Technical Standards

### Alignment Accuracy

API Standard Compliant

Series

DKQ Series

## Operational Features

### Key Operational Benefits

- Pneumatic expansion for secure grip
- High-precision alignment for welding
- Quick setup and release mechanism
- Robust construction for industrial durability
- Reduced manual labor requirements

Primary Applications

Pipeline Construction, Pipeline Repair, Pipe Maintenance, Welding Assembly
