

Pneumatic Jackhammer - Air Powered Demolition Tool

This pneumatic jackhammer is designed for demolition, construction, and industrial applications. It utilizes a robust air-powered mechanism for efficiently breaking and chipping concrete and asphalt.

Product Overview

Heavy-Duty Demolition Performance

This pneumatic jackhammer is engineered for demanding industrial, construction, and demolition environments. It utilizes a robust air-powered mechanism to efficiently break through concrete, asphalt, and other hard materials. Designed with operator comfort in mind, the tool features an integrated vibration dampening system to minimize fatigue during extended use.

Technical Specifications

Suitable Materials

- Concrete
- Asphalt
- Hard masonry

Power Source	Compressed Air
Primary Applications	Demolition, Construction, Industrial

Features

Key Features

Vibration Dampening • Heavy-Duty Construction • Ergonomic Handle
