

# Pneumatic Pipe Alignment Clamp

This pneumatic internal line-up clamp is designed for the precise alignment of pipes and vessels during welding. Its robust frame and pneumatic expansion system ensure secure and even clamping pressure for various pipe diameters and wall thicknesses.

## Overview

### High-Precision Pipeline Alignment

The DKQ series pneumatic internal line-up clamps represent a new generation of pipeline alignment technology, engineered for superior stability and ease of operation. Designed to meet or exceed rigorous API standards, these clamps ensure precise fit-up for pipes and vessels during welding processes. Their robust construction and automatic braking systems provide reliable, consistent performance even in challenging field conditions.

## Technical Specifications

### Alignment Accuracy

Meets API Standards • Exceeds API Standards

### Key Operational Features

- Automatic brake settings for high reliability
- Reinforced power mechanism for superior stability
- Precise control on downgrade operations
- Designed for consistent clamping pressure

Series

DKQ

Pneumatic Operation

Yes
