

Pneumatic Swing Cylinder for Rotary Motion

Pneumatic swing cylinder designed for rotary motion applications. Features a compact design with a rotating table for precise angular positioning.

Product Overview

Precision Rotary Motion

This pneumatic swing cylinder is engineered for precise angular positioning and rotary motion applications. Featuring a compact design with an integrated rotating table, it is an ideal solution for complex automation and material handling systems. The unit offers reliable and accurate swing motion with adjustable angle settings, ensuring consistent performance in demanding industrial environments.

Technical Specifications

Key Features

- Compact design
- Integrated rotating table
- Adjustable angle settings
- Durable industrial construction

Model Series	EMQ-20
Primary Application	Automation, Material Handling, Rotary Motion
