

# Pneumatic Wood Clamp Carrier

This pneumatic clamp carrier is a specialized woodworking machine for assembling and clamping wood components. Its pneumatic cylinders ensure consistent pressure distribution, streamlining gluing and clamping in furniture manufacturing.

## ADDITIONAL IMAGES

## Overview

### Industrial Wood Assembly Solution

The Pneumatic Wood Clamp Carrier is a high-performance machine engineered for efficient wood component assembly and gluing. Featuring a robust steel frame and a precision pneumatic system, it ensures consistent, uniform pressure distribution across workpieces for strong, high-quality bonds. Designed for industrial environments, this carrier streamlines production workflows for furniture, door, and window manufacturing by minimizing manual labor and optimizing clamping speed.

## Technical Specifications

Clamping System Type	Pneumatic
Pressure Control	Yes
Frame Material	Robust Steel

## Operational Features

### Key Operational Features

- Even pressure distribution
- Multiple clamping stations
- Centralized control panel
- Adjustable clamps for various dimensions
- High-volume production ready

Suitable Applications	Furniture Manufacturing, Door Assembly, Window Production, Woodworking
