

Pocket Surface Roughness Tester

This surface roughness tester has a wide measuring range suitable for most materials. It is applicable for flat, outer cylinder and sloping surfaces.

Product Overview

Compact Surface Roughness Measurement

This portable surface roughness tester is designed for efficient on-site measurement of surface texture in manufacturing and engineering environments. Its compact, pocket-sized form factor makes it ideal for quality control, inspection, and process monitoring in workshops or laboratories. The device features a clear digital display for immediate reading of critical parameters such as Ra and Rz, ensuring quick and accurate surface finish analysis.

Technical Specifications

Measurement Parameters

- Ra
- Rz

Power Source

Rechargeable battery

Display

LCD Digital Display

Sensor

Built-in standard sensor

Key Features

Usability

Portable • Pocket-sized • Rechargeable • Easy-to-read

Applications

Quality Control, Manufacturing, Engineering, Laboratory Testing, Workshop Inspection
