

Point of Sale Terminal

This point of sale terminal facilitates efficient transaction processing. It is suitable for retail and service environments, offering a reliable solution for managing sales.

Overview

Solar Charge Controller

This solar charge controller is an essential component for solar power systems, designed to regulate voltage and current from solar panels to protect batteries from overcharging. It optimizes battery performance and extends lifespan by preventing over-discharge and managing various charging stages. With integrated indicators for solar input, battery status, load output, and communication, it ensures efficient and safe operation of solar energy storage.

Technical Features

Control Interface

- Parameter setting buttons
- Digital display
- SET button
- ESC button

System Indicators

Solar Input, Battery Status, Load Output, Communication
