

Polycarbonate LED Tube Light

This LED tube features a polycarbonate (PC) body for durability and efficient light diffusion. It is designed as a replacement for traditional fluorescent tubes, providing energy savings and a longer lifespan.

Product Overview

High-Efficiency Polycarbonate LED Tube

This LED tube light is engineered with a durable polycarbonate body, designed to serve as an efficient, long-lasting replacement for traditional fluorescent lighting. Its robust construction offers excellent impact resistance and thermal stability, ensuring reliable performance across diverse environments. Ideal for commercial, industrial, and residential applications, this solution provides significant energy savings while maintaining consistent light diffusion.

Technical Specifications

Key Advantages

- Energy efficient
- Extended operational lifespan
- Impact resistant
- Temperature variation tolerant

Body Material	Polycarbonate (PC)
Suitable Applications	Commercial, Industrial, Residential
