

Polycrystalline Solar Panel 1640x992mm

This high-efficiency polycrystalline solar panel is designed for renewable energy generation. The module delivers reliable performance in various environmental conditions, including low light.

Product Overview

High-Efficiency Polycrystalline Solar Solution

This polycrystalline solar module is engineered to provide reliable performance for both residential and industrial energy systems. Measuring 1640mm x 992mm, it offers a compact footprint while maintaining consistent power output across various environmental conditions. Designed for durability and long-term energy production, this panel is a cost-effective choice for grid-tied and off-grid solar projects.
