

Polyethylene Foam Bag Production Machine

This PE foam bag making machine efficiently produces polyethylene foam bags. Its automated process cuts, seals, and shapes PE foam into various bag sizes.

Product Overview

High-Efficiency PE Foam Bag Production

This automated polyethylene foam bag making machine is engineered for the precise cutting, sealing, and shaping of PE foam materials. It features a robust roll feeding mechanism and an adjustable cutting unit, ensuring consistent output for various bag sizes. Designed for versatility, it is ideal for manufacturing specialized packaging, insulation, and protective cushioning solutions.

Technical Specifications

Production Capabilities

- Automated cutting and sealing
- Adjustable bag sizing
- Durable bag closure system
- Roll feeding mechanism

Control Parameters

Bag Length Adjustment, Bag Width Adjustment, Sealing Temperature Control, Production Monitoring

Applications

Primary Applications

Packaging • Insulation • Cushioning
