

Polyethylene Fruit Net and Profile Extrusion Line

This PE fruit net and profile extrusion line is a complete system for continuous production. The line integrates material feeding, extrusion, cooling, shaping, and cutting processes to ensure efficient, high-quality output.

Product Overview

High-Efficiency Extrusion System

This polyethylene fruit net and profile extrusion line is a complete, integrated system designed for continuous, high-quality production. It seamlessly combines material feeding, extrusion, cooling, shaping, and cutting processes into a single efficient workflow. Engineered for versatility, the line supports the manufacturing of various sizes and shapes of nets and profiles, making it an ideal solution for industrial packaging and protection applications.

Technical Specifications

Compatible Material	Polyethylene
Process Capabilities	Material Feeding, Extrusion, Cooling, Shaping, Cutting
Control Interface	Yes

Application

Target Applications

- Fruit protection nets
- Polyethylene profiles
- Industrial packaging materials
