

Polyurethane Lined Ductile Iron Pipe

Ductile iron pipe is internally lined with polyurethane for enhanced corrosion resistance and smooth flow. It is ideal for water and wastewater applications, providing long-lasting performance and reduced maintenance.

Product Overview

High-Performance Ductile Iron Piping

These centrifugally cast ductile iron pipes feature an advanced internal polyurethane lining, designed to provide superior corrosion resistance and optimal flow characteristics. Engineered for durability and long-term reliability, they are an ideal solution for demanding water and wastewater infrastructure projects. With diverse sizing options and robust manufacturing standards, these pipes ensure consistent performance across varied environmental conditions.

Technical Specifications

Available Lengths

- 6 meters
- 8.15 meters

Nominal Diameter Range	DN80 - DN2600mm
Manufacturing Process	Centrifugal casting

Certifications & Compliance

Certifications	ISO 9001, ISO 14001, GB/T 28001, BV Certified, KS Certified
----------------	---

Performance Metrics

Annual Production Capacity

38000 km

Annual Pipeline Capacity
