

Polyurethane Roller for Metal Forming

High-performance polyurethane roller designed for metal forming machines. It features a durable polyurethane outer layer bonded to a robust metal core, offering excellent resistance to wear, abrasion, and deformation under high loads.

Product Overview

High-Performance Metal Forming Roller

This polyurethane roller is engineered specifically for demanding metal forming applications. It features a durable polyurethane outer layer bonded to a robust metal core, ensuring exceptional resistance to wear, abrasion, and deformation even under high-load conditions. The green-painted metal core provides the structural integrity and precise mounting capabilities required for consistent material handling and shaping.

Technical Specifications

Core Material	Metal
Coating Material	Polyurethane
Key Features	Wear Resistant, Abrasion Resistant, High Load Capacity, Deformation Resistant

Application

Primary Application	Metal forming and material handling
---------------------	-------------------------------------

Design

Core Finish
Green Painted
