Overview

High-Efficiency Pool Water Heat Pump

This advanced air-to-water heat pump is designed for high-efficiency pool heating, offering energy savings of over 75% compared to traditional heaters. It features automatic temperature control, a large evaporator for enhanced performance, and robust construction suitable for various environments. The unit operates with a focus on clean energy, contributing significantly to reduced CO2 emissions while providing reliable, automated climate control.

Performance & Technology

Energy Savings

75 %

Energy Consumption Reduction

Compressor Technology	Scroll Compressor
Water Pressure Range	0.6Mpa - 0.9Mpa
Control & Automation	Full Automatic Start/Stop, LCD Touch Screen Controller, Temperature Based Automation

Commercial Terms

Trade & Logistics

Term	Detail
Minimum Order Quantity	3 Units
Delivery Time	15 days after deposit
Warranty Period	14 months
Price Validity	1 Month

Payment Terms

- 30% T/T deposit to start production
- 70% balance before shipping

Packaging

Standard Export Plywooden Crate with internal plastic bag protection
