

Porcelain and Polymeric Insulators

Porcelain and polymeric insulators offer reliable insulation and mechanical support for conductors. They are constructed from durable materials, providing resistance to environmental factors and electrical stress.

Product Overview

High-Performance Insulators

These insulators are engineered for reliable performance in electric power transmission and distribution systems. Designed to provide excellent electrical insulation and mechanical support, they ensure safe and efficient energy transfer across various network configurations. The range includes durable solutions suitable for substations, transmission lines, and rural utility networks.

Product Features

High-quality porcelain post insulators designed for reliable performance in electric power transmission and distribution systems.

Certifications

CE • ISO 9001 • UL

Available Configurations

Porcelain Post, Polymeric Strain, Power Spool, Standoff, Cable, Epoxy Disc

Technical Specifications

Primary Applications

- Electric power transmission
- Distribution networks
- Substations
- Fiber optic utility networks
- Overhead line fittings

Standard Warranty	1 year
Standard Lead Time	15 days
