

Porcelain Enamel Lined Water Tank

This tank features a double enamel inner container structure, designed for efficient operation. The porcelain enamel lining ensures high heat exchange efficacy, clean water, and durability.

Product Overview

Intelligent Heating and Storage Solution

This porcelain enamel lined water tank is designed for efficient heat circulation and reliable hot water storage. Featuring an intelligent control system, the unit automatically manages auxiliary heating sources, including solar and electric options, to maintain user-defined temperatures without manual intervention. Its durable construction ensures longevity and consistent performance in demanding industrial or commercial applications.

Technical Specifications

Heating Mechanism

- Circulating water inlet for heat medium
- Automatic air discharge via gas outlet
- Solar heat source integration
- Electric heating auxiliary

Control Features

Intelligent Control, Automatic Temperature Regulation, Solenoid Valve Activation, Maintenance-Free Operation

Construction

Lining Material

Porcelain Enamel

Design

Container-in-container
