

Port Construction Project

This project involves ongoing construction at Zhuhai Port. Heavy machinery, waterfront infrastructure, and buildings are part of the port's development.

Project Overview

Zhuhai Port Development

This large-scale port construction project focuses on the development of critical waterfront infrastructure, including piers and specialized docking facilities. Utilizing heavy-duty machinery such as industrial cranes, the site is engineered to support high-capacity maritime logistics and cargo handling. The development represents a significant expansion of regional port capabilities, designed for long-term operational efficiency.

Project Type

Infrastructure • Maritime • Port Development

Equipment & Machinery

Key Equipment

- Heavy-duty industrial cranes
- Waterfront construction machinery
- Docking infrastructure systems

Active Machinery Units

5 units

Heavy Cranes (Visible)
