Product Overview

Industrial Dust Collection Hopper

This heavy-duty hopper is engineered for efficient material handling and dust control in demanding port environments. It is designed to facilitate the loading and unloading of bulk materials like coal, cement, and iron ore, while minimizing airborne dust. The system can be customized with integrated dust catchers, hydraulic doors, and vibrating material feeders to significantly enhance operational efficiency.

Key Features

Integrated Components

- Dust Catcher System
- Electronic Hydraulic Door
- Vibrant Material Supplying Devices

Material Handling Capabilities

Coal Cinder Handling, Cement Powder Handling, Iron Ore Handling, Granular Sand Handling, Dust Control

Technical Specifications

Mobility

Wheeled Base • Easy Positioning

Construction

Robust steel frame construction

Design Customization

Yes
