

Portable 230V Gasoline Generator

This portable gasoline generator is designed for a 230V power supply. It features an engine switch, V.F.T display, and overload protection, and is equipped with AVR (Automatic Voltage Regulator).

Overview

Reliable Portable Power Solution

This portable gasoline generator is engineered to provide a consistent 230V power supply for various professional and field applications. Equipped with an Automatic Voltage Regulator (AVR) and a versatile V.F.T display, it ensures stable output and easy monitoring of essential operational parameters. Designed for durability and safety, this unit includes integrated overload protection and a user-friendly engine switch.

Technical Specifications

Frequency

- 3000
- 3600

Rated Voltage

230 V

Key Features

Interface Components

Engine Switch • V.F.T Display

Safety & Protection

Overload Protection, AVR (Automatic Voltage Regulator)
