

Portable Air Compressor with Horizontal Tank

This is a portable air compressor featuring a horizontal tank, twin cylinder pump, and pressure regulator. The compressor is designed for various applications requiring compressed air, such as spraying, inflating, and powering pneumatic tools and has a handle for convenient transportation.

Product Overview

Professional Portable Air Compressor

This high-performance portable air compressor features a robust horizontal tank design engineered for versatility and ease of use in diverse professional environments. Equipped with a twin-cylinder pump and an integrated pressure regulator, it provides a consistent and reliable air supply for demanding tasks. Its mobile configuration, supported by durable wheels and a convenient transport handle, makes it an ideal solution for applications ranging from industrial spraying and inflating to powering various pneumatic tools.

Key Features

Design Features

- Horizontal tank configuration
- Twin cylinder pump system
- Integrated pressure regulator
- Portable design with wheels
- Ergonomic handle for mobility

Application Compatibility

Pneumatic tools, Spraying, Inflation
