

Portable Air Conditioner Unit

This portable air conditioner is a self-contained cooling unit designed for single-room use without permanent installation. It has adjustable temperature settings, multiple fan speeds, a timer, and a remote control, and some models offer dehumidifying.

Product Overview

Versatile Portable Cooling Solution

This self-contained portable air conditioner is designed to provide efficient cooling for single rooms or specific areas without the need for permanent installation. It utilizes a reliable refrigerant-based cooling system alongside an integrated fan to circulate air effectively. With convenient features like adjustable temperature settings, multiple fan speeds, and built-in dehumidification, it offers a flexible climate control solution for homes, apartments, and office spaces.

Key Features

Operational Features

- Adjustable temperature settings
- Multiple fan speeds
- Programmable timer
- Dehumidifying function
- Remote control operation

Design & Mobility

Mobility

Portable, Caster wheels, Self-contained unit

Installation

No permanent installation required; includes exhaust hose

Applications

Recommended Environments

Residential • Apartments • Offices
