

Portable Air-Cooled PVC PU Conveyor Belt Splicing Machine

This machine is designed for splicing PVC and PU conveyor belts in various industries. It features an integrated air-cooling system and air compressor for quick cooling and auto-pressing, eliminating the need for a water pump or additional air compressor.

Overview

Professional Belt Splicing Solution

This portable air-cooled splicing machine is engineered for the efficient and reliable joining of PVC and PU conveyor belts. Designed for versatility, its compact and lightweight frame allows for easy transport to on-site repair locations, significantly reducing industrial downtime. The integrated air-cooling system ensures consistent temperature control, preventing overheating and maintaining the integrity of the belt during the bonding process.

Technical Specifications

Cooling Method	Air-Cooled
Compatible Belt Types	PVC, PU

Compliance & Quality

Certifications

CE • GUARDIAN • GIC

Key Features

Operational Advantages

- Precise alignment for uniform pressure distribution
- User-friendly temperature and pressure controls
- Portable design for on-site maintenance
- Prevents overheating to extend equipment lifespan

Applications

Suitable Industries

- Logistics
- Food Processing
- Manufacturing
