

Portable DC MMA Welding Machine 30-180A

This portable inverter-based DC welding machine is designed for manual metal arc (MMA) welding. It features adjustable current output, ranging from 30A to 180A, allowing for versatile welding of various materials and thicknesses.

Product Overview

Portable DC MMA Welding Machine

This portable, inverter-based DC welding machine is designed for manual metal arc (MMA) welding applications. It features a wide voltage input range, making it highly suitable for use with non-professional power grids. With its compact and lightweight design, it is an ideal solution for both workshop and on-site welding tasks.

Performance Specifications

Welding Current

30 A Min Current	180 A Max Current
----------------------------	-----------------------------

Power Features

- High no-load voltage
- Wide voltage input range
- Voltage fluctuation compensation

Welding Process

Manual Metal Arc (MMA)

Safety & Reliability

Safety Features

Thermal Overload Protection, Voltage Fluctuation Compensation

Application

Compatible Materials

Mild Steel, Stainless Steel, Ferrous Metals
