

Portable Device Programmer

This is a handheld programmer. It is designed for portable use.

Product Overview

Professional Handheld Synchronization Tool

The BU71 is a versatile handheld programmer designed to efficiently synchronize PDW OE replacement sensors. It supports both 315MHz and 433MHz frequencies, offering broad compatibility for automotive maintenance needs. With features like batch programming and real-time sensor data monitoring, it streamlines the workflow for professional technicians.

Technical Specifications

Part Number	04.01.09 BU71
Supported Frequencies	315MHz, 433MHz

Key Features

Programming Capabilities

- Automatic data pairing duplication
- Batch programming (up to 20 sensors simultaneously)
- Free upgrade for supported vehicle models
- Multi-lingual interface
