

Portable Dual-Use Telescope with Tripod

This optical instrument is designed for viewing distant objects. It features adjustable magnification and is mounted on a tripod for stability.

Product Overview

Dual-Use Optical Excellence

This portable telescope is engineered for versatility, offering dual-use capabilities that bridge the gap between terrestrial and astronomical observation. Its user-friendly design features a precision objective lens and adjustable magnification, ensuring clarity for long-distance viewing. Mounted on a stable, included tripod, it provides the steadiness required for both bird-watching and stargazing applications.

Technical Specifications

Key Functional Features

- Adjustable focusing mechanism
- Portable lightweight chassis
- Includes stable observation tripod
- Dual-use optical design

Instrument Type	Portable Dual-Use Telescope
Application Range	Terrestrial Observation, Astronomical Observation, Field Scouting
