

Portable Electric Rebar Cutter and Bender

This portable electric rebar cutter and bender is designed for cutting and bending rebar on construction sites. It features a cordless design with a rechargeable battery, a high-strength cutting blade, and a bending mechanism suitable for various rebar sizes and angles.

Product Overview

Professional Rebar Processing

This portable electric rebar cutter and bender is engineered for efficiency on demanding construction sites. Its cordless, rechargeable design eliminates the need for external power sources, providing maximum mobility for field operations. The unit combines a high-strength cutting blade with a precision bending mechanism to handle various rebar sizes and angles with ease.

Key Features

Core Features

- Cordless operation with rechargeable battery
- High-strength integrated cutting blade
- Precision bending mechanism
- Portable and compact design
- Suitable for multiple rebar sizes
