

# Portable Gasoline Engine Water Pump

This portable gasoline engine water pump is designed for various water transfer applications. It features a robust four-stroke engine for reliable performance and a durable pump housing for extended service life.

## Overview

### Portable Gasoline Engine Water Pump

This portable gasoline engine-driven water pump is engineered for versatile water transfer applications, including irrigation, drainage, and construction site support. Featuring a robust four-stroke engine and a durable pump housing, it delivers reliable performance and long service life even in demanding environments. Its compact design, sturdy frame, and recoil starter system ensure easy transport and quick, stable operation for professional users.

## Technical Specifications

Engine Type	Four-stroke gasoline engine
Starting Mechanism	Recoil starter

## Features

### Key Features

- Portable compact design
- Durable pump housing
- Sturdy protective frame
- Standardized hose connections

## Applications

Suitable Applications	Irrigation, Drainage, Construction, Water Transfer
-----------------------	----------------------------------------------------

## Safety & Maintenance

### Operational Safety

To ensure optimal performance and longevity, it is critical to read and understand the engine owner's manual before operation. Incorrect operation or maintenance of the engine can cause malfunctions and significantly shorten the equipment's service life.
