

Portable Gasoline Generator WM1300

This portable gasoline generator is designed for providing electrical power in locations without grid access. It features a compact design with a protective frame for durability and easy transport.

Overview

Portable Power Solution

The WM1300 is a compact gasoline generator designed to provide reliable electrical power in remote locations or during power outages. Its durable protective frame ensures longevity while maintaining portability for use on construction sites or during outdoor activities. This lightweight unit serves as an efficient backup power source for essential electrical devices.
