

Portable Gasoline Water Pump

This gasoline water pump is a portable and powerful solution for water transfer applications. It is designed for efficient operation, delivering a high flow rate for quick water removal or irrigation.

Overview

High-Performance Portable Water Transfer

This portable gasoline water pump is designed for efficient water management in demanding environments such as construction sites and agricultural fields. Powered by a robust 7.0HP engine, it delivers a high flow rate of 550L/min to ensure quick water removal or irrigation. Its durable construction and reliable recoil starting system make it a versatile and dependable solution for various water transfer applications.

Performance Metrics

Max Flow Rate

550 L/min
Max Flow

Max Head Lift	28 m
Max Suction Head	8 m

Engine Specifications

Engine Power	7 HP
Displacement	208 cc
Fuel Tank Capacity	3.6 L
Starting System	Recoil

Technical Details

Packaging
Carton box

Suction & Discharge Port	50mm (2 inch)
