

Portable Gasoline Water Transfer Pump

This portable gasoline water transfer pump is designed for efficient water removal and transfer in various applications. Featuring a robust roll cage for protection and portability, it is powered by a gasoline engine for reliable performance.

Overview

Professional Water Management Solution

This portable gasoline water transfer pump is engineered for efficient liquid movement across a variety of demanding environments. Built with a durable roll cage for maximum site protection and portability, this unit ensures reliable operation in remote areas without electrical access. It serves as an essential tool for agricultural irrigation, site drainage at construction projects, and emergency water removal.

Performance

Power Source	Gasoline Engine
Suitable Applications	Irrigation, Construction Site Drainage, Emergency Water Removal

Physical Characteristics

Design Features

- Robust roll cage for impact protection
- High portability for remote sites
- Heavy-duty engine assembly
